

# SAP-INTEGRATED CONSUMER GOODS CLOUD

Install ready-to-use SAP components from the Vigience Overcast SAP-Integrated Consumer Goods Cloud offering today to remove project risk and cost uncertainty for the most advanced Salesforce to SAP integration requirements. A simple yet powerful solution enabling back office and field users (including offline-capable retail execution apps from Axsy and Pitcher) to work reliably with SAP data including:

- ✓ Integrated Store, Account and Product master data
- ✓ Account-specific daily price lists based on SAP pricing engine
- ✓ Real-time availability check and live pricing against SAP
- ✓ Post sales orders correctly to SAP from Salesforce or the mobile device

## Vigience Overcast Solutions

CONSUMER GOODS CLOUD**

Vigience Overcast provides pre-built, configurable deep business process integrations between the mobile app, Salesforce and SAP so that your end-users get a seamless experience across all Salesforce and SAP data.

Real-time prices from SAP surfaced in the CG Cloud mobile apps

## VIGIENCE OVERCAST

Overcast is a Salesforce-native app to integrate Salesforce with on-premise systems. Unlike Mulesoft or SAP PI, Overcast is not another Integration PaaS to build APIs and extract master data.

Instead, Overcast provides ready-to-use SaaS business applications consisting of Lightning Components (UI), integration & business logic and real-time SAP-connectivity that can be installed into Salesforce and used productively within days of signing the contract.

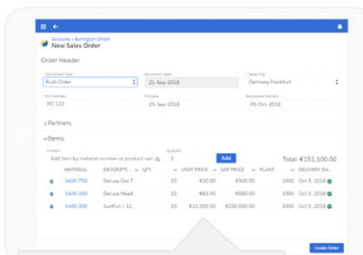

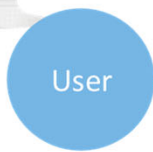

Leverage 30+ pre-built, deep SAP integration components to enable end-to-end business processes across Salesforce and SAP or configure your own custom integrations against any backend.

Overcast unifies Salesforce and SAP data & processes in a seamless way like no other solution.

Overcast Components display or post SAP data. BYO end-to-end integrations with zero coding.

Overcast handles the real-time frontend integration via APIs and the user mapping / SSO to SAP.

Overcast's big USP: directly consume 30'000+ APIs in SAP ERP or S/4HANA "as is" with zero work required on the backend! It can also read from any table or view and integrate any other system via any web service.

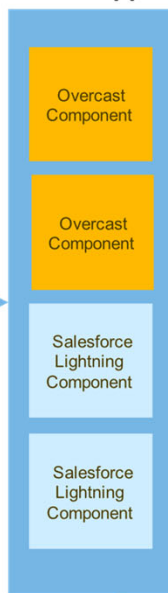

Overcast allows you to edit & create SAP Sales Orders in real-time. From a mobile device or the browser...

Build any custom Salesforce Lightning Components or native mobile application UI on top of Overcast.

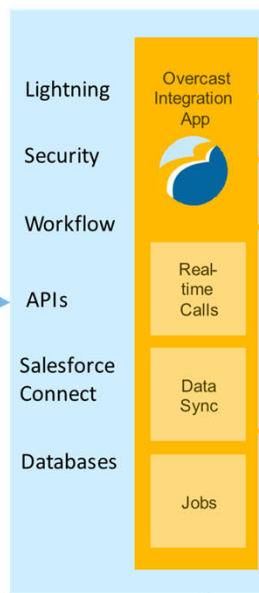

Overcast also handles all data synchronization needs by replicating data to and from any API, DB or WS.

When there are no clean APIs or Microservices available yet, optionally connect via Mulesoft or SAP PO. They excel at providing & managing APIs for consumption.
